Astronomy A Process Approach Lab

It is the only workbook on observational astronomy worth buying. That said, I do not use it as a lab manual for my introductory college-level class, but rather for my 200-level observational astronomy class. As it is self contained, and includes many historically important exercises, it is the perfect workbook for a process based class.

A STUDENT'S HANDBOOK OF LABORATORY EXERCISES IN ASTRONOMY

Astronomy is an observational science, as opposed to most of the rest of physics, which is experimental in nature. Astronomers cannot create a star in the lab and study it, walk around it, change it, or explode it. Astronomers can only observe the sky as it is, and from their observations deduce models of the universe and its contents.

Astronomy is science that will challenge your imagination. How many stars in a galaxy? How many galaxies in the known universe? How many strange worlds are out there on other planets, orbiting other stars, and what are they like? Is there life on planets besides Earth? The distances are mind-boggling; the numbers are immense.
