explain this and how can they facilitate better cooperation between countries? A global climate change solution has been stuck due to the unwillingness or inability of developed nations like the U.S. to take responsibility of their large share of the past and current greenhouse gas emissions. Reducing emissions in developed countries is not enough, and the weighted action needed cannot be equal between developed and developing nations.

Global environmental change is one of the most pressing issues of our generation, and it's time we think about how we can align our academic interests with international efforts to address climate change, particularly in the field of international relations.

International relations professionals are increasingly involved in policy-making processes that are essential to curbing the damage we have done, and continue to do, to our beautiful planet.

in comparative politics and international relations to describe and explain climate policy trajectories of seven key actors: Brazil, China, the European Union, India, Japan, Russia, and the United States. Using a common conceptual framework, the authors find that ambitious climate policy change is limited by stable material parameters and that governmental supply of mitigation policies meet (or even exceed) societal demand in most cases. Given the important roles that the seven actors play in addressing global climate change, the book's in-depth comparative analysis will help
