which a collectively shared and generated content is emerged from Internet end-users. Specifically, the book presents advances on managing and exploiting the vast size of data generated from within the smart environment (i.e. smart cities) towards an integrated, collective intelligence approach. The book also presents methods and practices to improve large storage infrastructures in response to increasing demands of the data intensive applications. The book contains 19 self-contained chapters that were very carefully selected based on peer review by at least two expert and independent reviewers and is organized into the three sections reflecting the general themes of interest to the IoT and Big Data communities: Section I: Foundations and Principles Section II: Advanced Models and Architectures Section III: Advanced Applications and Future Trends The book is intended for researchers interested in joining interdisciplinary and transdisciplinary works in the areas of Smart Environments, Internet of Things and various computational technologies for the purpose of an integrated collective computational intelligence approach into the Big Data era.

Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle.

This book examines genres as instances of social processes, enacting a range of important institutional practices, hence also shaping people's subjectivities. Genres represent purposive and staged ways of building means in a culture. The book's particular claim to originality is that, using systemic functional grammar, it demonstrates how given genres build or enact social practice, how educational setting provide contexts in which some apprenticeship into such genres occurs, and how theorizing about such matters helps build a theory of social action, revealing how powerful is the systemic functional analysis in addressing questions concerning the social construction of reality. The discussion is built around extensive analysis of instances of texts collected in a number of worksites and school settings. While most are instances of written genres, some are spoken, most notably the chapter that is devoted to the discussion of the spoken classroom texts in which the teaching and learning of the written genres take place.

The Jan. 1956 issue includes Fluid power engineering index, 1931-55.

This book describes, for the first time in pedagogical form, an approach to computer-based work in complex sociotechnical systems developed over the last 30 years by Jens Rasmussen and his colleagues at Risø National Laboratory in Roskilde, Denmark. This approach is
