Aortic regurgitation may be a chronic disease process or it may occur acutely, presenting as heart failure. [2] T The most common cause of chronic aortic regurgitation used to be rheumatic heart...

Aortic Regurgitation: Background, Pathophysiology, Etiology

Aortic insufficiency (AI), also known as aortic regurgitation (AR), is the leaking of the aortic valve of the heart that causes blood to flow in the reverse direction during ventricular diastole, from the aorta into the left ventricle. As a consequence, the cardiac muscle is forced to work harder than normal.

Aortic insufficiency - Wikipedia

Fibrotic changes cause thickening and retraction of the aortic valve leaflets, resulting in central valvular regurgitation. Leaflet fusion may occur, leading to concurrent aortic stenosis....
