Estimation and Inference in Econometrics by Davidson ...

Estimation and Inference in Econometrics. Russell Davidson and James G. MacKinnon. Description. Offering students a unifying theoretical perspective, this innovative text emphasizes nonlinear techniques of estimation, including nonlinear least squares, nonlinear instrumental variables, maximum likelihood and the generalized method of moments, but nevertheless relies heavily on simple geometrical arguments to develop intuition.

Estimation and Inference in Two-Step Econometric Models ...

Econometrics is the study of estimation and inference for economic models using economic data. Econometric theory concerns the study and development of tools and methods for applied econometric applications. Applied econometrics concerns the application of these tools to economic data. 1.1 Economic Data An econometric study requires data for analysis.

11.3 Estimation and Inference in the Logit and Probit Models. So far nothing has been said about how Logit and Probit models are estimated by statistical software. The reason why this is interesting is that both models are nonlinear in the parameters and thus cannot be estimated using OLS. Instead one relies on maximum likelihood estimation (MLE). Another approach is estimation by nonlinear ...

This paper considers estimation and inference in panel vector autoregressions where (i) the individual effects are either random or fixed, (ii) the time-series properties of the model variables are unknown a priori and may feature unit roots and cointegrating relations, and (iii) the time dimension of the panel is short and its cross-sectional dimension is large.

This paper presents a new approach to estimation and inference in panel data models with a general multifactor error structure. The unobserved factors and the individual-specific errors are allowed to follow arbitrary stationary processes, and the number of unobserved factors need not be estimated.
