Descriptive Flexfields (DFF) - represent the basic option for adding custom fields to a business object or transaction.

Descriptive flexfields can have one or more segments and support the option to add specified contexts against which they offer users a set of input values.

Cloud Release 12

The reference field could be a :BLOCK.FIELD (Oracle Forms only) or a profile option (\$PROFILES\$ reference). During runtime, the flexfields engine reads the value of the reference field and tries to use the same value for the DFF context value. This context value has to be available in the DFF metadata if synchronization has
