PRINCIPLES OF Cell Biology

Cell Theory is one of the basic principles of biology. Credit for the formulation of this theory is given to German scientists Theodor Schwann (1810–1822), Matthias Schleiden (1804–1881), and Rudolph Virchow (1821–1902). The Cell Theory states: All living organisms are composed of cells.

Cell Theory: A Core Principle of Biology

The three principles of cell theory are: -All living things are made up of one or more cells. -Cells are the most basic units of. structure and function in living things. -All cells are created by pre-. existing cells. The distinction between Prokaryotic Cells and Eukaryotic Cells is considered the most important distinction among groups of organisms.

According to the cell theory, all living things are made up of cells, which is the structural unit of living organisms, and living cells always come from other living cells. In fact, each living thing begins life as a single cell. Some living things, such as bacteria, remain single-celled. Other living things, including plants and animals, grow and develop into many cells.
