Simbio Trees Answers

Introduces students to evolutionary trees using an interactive simulation of Columbine flower diversification. Students observe Columbine populations split and diverge while an expanding evolutionary tree illustrates each population's history. Students further learn to interpret evolutionary trees by creating their own and reconstructing the history of mystery populations.

All of the modules listed below explore evolutionary topics. Most of the labs are built around classic study systems and work well both in place of traditional "wet" labs, or as homework assignments. Darwinian Snails, Sickle-Cell Alleles, Mendelian Pigs, and Evolutionary Evidence are particularly popular in introductory-level courses.

[16.2] Draw what the tree will look like if you transfer a seed from Peak 1 to Peak 3: [18.1] Was your prediction in Question 16.2 correct? Yes my prediction was correct because Peak 1 was split into two populations, Peak 1 and Peak 3, which was shown by a new additional branch (Peak 3). Peak 3 now shares a common ancestor with peak 1. The white box, or node, marks the population that ...
