A split air conditioner consists of an outdoor unit and an indoor unit. The outdoor unit is installed on or near the exterior wall of the room that you wish to cool. This unit houses the compressor, condenser coil and the expansion coil or capillary tubing. The sleek-looking indoor unit contains the cooling coil, a long blower and an air filter.

What is a Split Air Conditioner System? | Networx

A split air conditioner is composed of two separate units, a condensing unit and an evaporative coil (known as a "condenser," and a "coil" respectively in short-hand or slang). It is from these two separate units that a split air conditioner gets its name. These units are joined by a set of copper tubing known as a "line-set," which transfers refrigerant from one unit to another.

“ Split systems ” are the air conditioners that provide cooling to different “zones” within a home. These systems, unlike window units or portable air conditioners, are not self-contained appliances, but as the name suggests, are comprised of a two-part system. These are most commonly used in buildings without a comprehensive duct system.
