The Stihl 4-Mix engine has 2 valves and two pushrods. The exhaust valve has a brass sleeve the pushrod rides on. If you run the 4-mix in heavy grass or for extended periods of time in high ambient temps the brass sleeve will fail under high heat of the 4-mix engine; causing the push rod to drop onto the piston head seizing the engine.

For the OP, as you saw in the diagram below and read in some discussion; the 4-mix is sort of a hybrid between a 2-stroke & 4-stroke. The valves are odd to find when first looking at the engine! I've been told by my Stihl dealer they 4-mix engines haven't made it to the saws due to odd dimensions (referenced in an earlier post) and weight.

Shindiawa hybrid 4-vs stihl 4 mix I have the unusual experience of having read and seen animation of one of these engines and had the other engine in hand to examine. The Shindiawa does something I like by sending all the air/fuel/oil mix to the crankcase and creating a supercharging effect to feed the intake valve.

It's highly dependent on the oil you use, but going from 50:1 to 40:1 often results in cleaner internals. I've run AMSOIL Sabre Pro, Dominator, and TruFuel (all at 40:1) through both of my 4-mix engines with no trouble. Proper carb tuning and ignition system performance will go a long ways to prevent carbon issues.

Fit just fine on my Stihl FS 45. The top is slightly different than the original but that didn't affect the fit at all. Really nice when you order a piece that says it fits, fits. It also comes pre-strung with some trim line. Haven't trimmed with it yet but I did start the engine and rev it up so I don't have too many worries. Went on really easy.
