Rotate the Tempstar's thermostat dial fully clockwise -- or slide the selector switch all the way up -- so that the air conditioner doesn't start while you troubleshoot it. A Tempstar central air conditioner employs a compressor located outside to drive cold air through vents. Insufficiently cold air or lackluster air pressure through the vents indicates a problem with the Tempstar that must be corrected.

Under normal conditions, your heat pump periodically switches to air conditioning mode for a few minutes, which heats up the outdoor coils enough to melt any frost and light ice that has accumulated. If the unit is not defrosting, ice can build up in a hurry. Defrost issues can be caused by faulty relays, controls, or sensors.
